## Red Cross Appeal Now Underway

Disaster is an ugly word. Anyone who has seen or experienced the sudden terrible destruction of a flash flood knows what the word means in human misery. It doesn't require much imagination to appreciate the problems and concern that would be felt if our homes were threatened at this moment.

No amount of preparation can prevent entirely the occurrence of disaster. What preparation can do is lessen the effect of fires, floods, epidemics, explosions and other catastrophes.

Perhaps no other organization in Canada has done more work in the field of disaster preparedness than the Canadian Red Cross Society. Within each organization, each province is under the constant study of a Disaster Services committee whose job it is to plan and carry out emergency services beforehand, and to arrange for the swift flow of aid to the scene of any disaster. Within each province are Red Cross branches, capable of caring for the needs of minor disasters at once. Each branch has a disaster committee, ready to help with transport, supplies and experienced workers.

And behind each division is the national organization which can draw on the help of other provinces.

In cooperation with all other agencies, the Red Cross works to cushion the shock, to prevent unnecessary suffering, to save lives. Its main job in any disaster is the provision of food, clothing, shelter, medical aid, transportation and the public service of answering welfare inquiries as to the conditions of disaster victims.

In the last few months of 1951, the Society provided these services at a total of 485 disasters, assisting 8,843 persons.

The work taken more than a month in Canada is taking every Canadian to live a little. The need for all Red Cross work in the year is \$5,222,000. It is a question, not so much of what we can afford, but of what we cannot afford to ignore.

**SEEDING THROUGH  
HEAVY TRASH**

Experimental farm notes.

The 1951 harvest season brought with it a large number of headaches. The large amount of tangled straw and unharvested swaths are causing many operators some concern over the difficulties that may be encountered during the spring seeding operations.

The problem of seeding through or under heavy trash covers has received considerable attention at the Lethbridge Experimental Farm, says Mr. D. T. Anderson, machinery specialist. "These studies included new seeding mechanisms designed for heavy trash conditions, and methods of using standard drills. Some of the results are of interest at this time."

Subsurface seeders consisting essentially of seed attachments to blade cultivators, have been used in comparative trials with standard drills. The results show that the results equal to other drills, provided first, that seed depths are carefully adjusted and maintained; secondly, that shallow seed beds are prepared or supplementary weed control measures are taken with the seed.

Hoe type drills have proven themselves very useful under conditions of heavy trash. The staggered furrow arrangement, developed on some farms, greatly increases the trash clearance of the machines. In some cases measures have been taken to break down the trash during seed bed preparation. This type tillage tools have been used for this purpose. Blade cultivators have been used successfully and have often been followed by trash mats or self-cleaning harrows. These two latter machines operate best when the trash is dry.

The trash clearance of standard double or single disc drills is greater than most operators realize. Stubble resulting from spring wheat yields up to 40 bushels per acre have been successfully handled by preparing the seed bed with a one-disc drill. The use of a packer after the drill greatly increases the traction for the disc furrow openers. The use of some form of tread or packer helps to eliminate the plugging

and dragging that often occurs in a loose seed bed.

Soil seeders have been used to seed in one operation from which 35 to 40 bushel crops have been taken the previous year. Best results have been obtained when sharp disks are used in the one way drill when a good subsoil surface is created behind the one-way seed er.

Many operators will likely give serious consideration to this practice. Stubble burning has shown no beneficial effects over a long time study made at this station. However, it has been found that stubble that is underdone and dried readily especially if it is not cultivated immediately. The unquestionable value of trash protection on the seed bed should lead each operator to take all possible measures to preserve the trash and to protect our most valuable resource—the soil.

## FROM THE FILES OF THE CALL

### TWENTY YEARS AGO

The Gleichen Midget Hockey team had a championship record in the 1931-32 season, winning the championship of Alberta when they defeated the Edmonton minors in a game series with a total score 3-1. Gleichen line up: Roberts, Haynes, McLean, T. T. T., T. Brown, C. McLean, McKay, Shantz, Balmer, Henton, Rishang and Taylor.

Mr. and Mrs. S. Dafae have opened a restaurant in the Post Office block. They want you to know anything about the place do not let me McLean's. Hockey is not only played half an hour but hours and days at a time there.

Alberta was a tropical country last year. Some were skating, golfing and playing ball with the temperature 70 above.

Hill Taylor and Bob Dodgson returned from Winnipeg Sunday after taking part in military tactics. They are anxious to get home for the final hockey games.

Tom Johnson has returned to town after spending the past year in Nelson.

Mr. and Mrs. W. Mattson and son left for Fernie last week. Mr. Mattson has been in charge of the Crown Lumber Co. yard here for several years.

### DEEPEST THOUGHTS ARE SIMPLEST

Length of days only serves to emphasize the fact that the deepest truths are simplest. The other evening I had come to read a passage from ancient philosophy and little needed the depth of truth contained therein, but in the process of reading it, I had to draw from it help in modern living.

The story is told of a visitor to the church of the great preacher who came away thinking that he had not heard the greatest message. He understood every word of the sermon, but he had heard the stammer and the speaker was a great success because he could do that very thing. Dabbers in scholars' robes, their ignorance of big words, their place in cheap rags for learning which were the involved and mystifying. But the greatest minds have written on the grandest themes in the simplest language. So successful writers have been in the past, that they have coined many place words of Anglo-Saxon origin if they desire power of expression. Then let us not be led astray by thinking that an idea is great in proportion to its浩瀚ness. The greatest truths of all time, in all ages, in all countries, in all languages, continue to be expressed in the simplest language.

Any owner of cattle who may have a foot and mouth disease in his herd should report to the veterinarian immediately. The report may be made to the nearest Health Animals Division Inspector, local veterinarian. Veterinary Services Branch of the Alberta Department of Agriculture, Edmonton, or to the Provincial Veterinary Laboratory, Lethbridge.

Under no circumstances should an owner call his neighbor over to see a suspected case, warns Dr. E. E. Ballantyne, Director of Veterinary Services. "Not only is being in his herd a bad thing, but the owner of the suspected animal to the Provincial Veterinary Laboratory." All inspection must be made on the owner's farm. The owner, moreover, must be taken to the Provincial Veterinary Laboratory.

Under no circumstances should an owner call his neighbor over to see a suspected case, warns Dr. E. E. Ballantyne. "Not only is being in his herd a bad thing, but the owner of the suspected animal to the Provincial Veterinary Laboratory."

## Midgels South Alberta Champions

Vergreville hockey boys will be here, Thursday night, to play a game with the Midgels. The second will be played in Vergreville Saturday.

The Gleichen Midget Hockey team went places last week. They played two games and each time the boys put it all over the boys from the south of the province.

The Midgels are now the champion hockey players in their class for the second half of Alberta, and before next week, they will play their final games with Vergreville for the provincial championship.

The first game here with Coleman resulted in 11-0 score, for Gleichen. Tom Wilson, the goalie, got a shut out for the first time in his career in a player series.

Gleichen made 5 goals in the first four of which were made by Owl Child. He had a goal scored once in the second. In the third game they made 5 more counters of which were made in less than two minutes when they had a man in the penalty box.

At Coleman Sunday the score was Gleichen 10 and Coleman 2. Each team made 4 goals in the first period, in the second Gleichen counted 2 and in the third 4.

After 25 fans from town witnessed the game which was played on soft ice.

Gleichen lineup: Doug Wilson, Doug Bassarab, Bernard Moss, Dennis Bremner, Jim McLean, Jim Beaumont, Arnold Copithorne, Art Gordan, Harry Sauve, Tom Gwaltney, Eddie Jerry, Michael Rabbit Carrier; Francis Bear Chief; Francis Tallow; Colin Grant; Hubert Low Horn.

Buster Stott manager and coach.

## Alberta History

A cattle drive in Alberta in 1811 started from the Peace River country. A ranch company had purchased 1,000 cattle in Montana and the I. G. Baker Co. had contracted to deliver them to a ranch near Calgary. Thirty cowboys and 30 horses were employed, but in order to live, many of them, many of them with their heads worn to the quick, were driven at such speed that those reaching the Calgary district reportedly exclaimed in wonder of the speed.

The stock was driven along at a merciless rate. From morning till night the poor animals were kept on the move and when night came they were too tired to feed. Strangely enough, however, the cattle, horses, cows and calves, the smaller calves were too weak to keep up and some were piled in wagons, some were trampled, many were left to die on the prairie, driven to drink water from a hole in the ground, to trade a calf for a pound of butter, a can of tea or a drink of milk. The loss ran into large figures.

The stock and the stock was finally turned over to the Bow River, and driven over to Major's Ranch and men who waited there."

Before the stock could recuperate, storms of winter came on and a total number of 12,000 cattle a scant 100 miles from the river. The company was disbanded and later moved their ranching to the McLeod area.

The record shows that by 1882 when the first recorded Redpoll (then called Pine Grosbeak), the winter visitors of the plains were rapidly disappearing. The buffalo once so numerous that they kept the grass eaten off, were almost gone. The big gray wolf, the "Wolverine", the wolf which had been tracked and poisoned by the "Wolverine", the antelope alone seemed to survive in large numbers.

In the neighborhood of Crows Coulees there was a small hill called "Wolverine".

There was a farm just west of McLeod Flat. In that year, Sgt. R. McCutcheon shot one near the site of the present town of Irvine. A Galt driver shot another ten miles west of Redpoll. That same year, John McLeod, a big buffaloes north of Milk River. On September 22nd post was returning home when he saw a large pure white animal at the distance. He and his riders gave chase and to their astonishment caught up with a Rocky Mountain Goat that had run from its natural haunts.

The last of the great west was rapidly changing.

It must be remembered that foot and mouth disease will infect all animals in a herd and not just one or two, says Dr. Ballantyne.

IMPERIAL OIL LIMITED  
THE SIGN THAT SAYS MORE FOR YOUR MONEY

## IMPLEMENT PRICES ARE LOW in comparison with prices of other supplies the farmer buys

The outstanding achievement by Massey-Harris in keeping the prices of its Canadian-made products at a low level of increase over 1941, is clearly shown by the above chart of price indexes.

All commodities are shown as 97.7% higher than 1941; raw materials are 98.2% higher; average hourly rates of pay Massey-Harris Canadian plants are 158.0% higher; yet Massey-Harris Canadian-made farm implements have increased only 66.2%.

The continued great world demand for labour-saving farm equipment has given a volume permitting high operating efficiency in relation to production and selling costs, making possible the partial absorption of the increased costs of materials and labour.

With the scarcity and high cost of experienced help, farmers find in modern machinery the means to maintain high volume production at low operating cost.

## Veterans On The Land

DURING THE LAST WAR many bright hopes were entertained for the time when the world would again be at peace. All these hopes have not been realized, but progress has been made in some things, and from these encouragement can be drawn for the future. One of the phases of post-war life in Canada which has been both of interest and of great importance has been the re-establishment of war veterans in civilian life. While in my judgment which so many are involved in this field, the results are not yet successful, it has been encouraging to see the large number of veterans who have been successful in the work which they have undertaken after leaving the services.

### Many Settle In The West

Government assistance for those who wished to finish educational courses started before the war, or to learn a new trade or profession, made it possible for many to fit themselves for work in their chosen field. For others, the Veterans Land Act provided opportunities to establish homes of their own, with holdings of land varying with their requirements. A record number of 1,000 families have settled on the Veterans Land Administration and that more than half of these are located in the four western provinces. Alberta has the largest number, with 8,559 veterans' farms, representing an investment of \$37,000,000. In Manitoba there are 5,753 veterans on farms valued at \$27,000,000, while Saskatchewan has 8,117, the investment there totaling \$34,000,000. British Columbia has 6,310 veterans holding land valued at \$30,000,000.

### An Indication Of Progress

Officials of the Veterans Land Act Administration report that very few of the veterans have failed in their efforts to establish homes on the land for which they have applied and there has been general satisfaction over the success of the undertaking. It is apparent that the veterans have profited by the opportunities which were offered to them after the war, and in so doing have benefited not only themselves, but the communities in which they have lived and worked since the peace was followed by the First World War. It will result that less time was given then to the re-establishment of the war veterans and that many of them had difficulty in adjusting to civilian life. Although, as was observed before, no plan of such proportions can be entirely successful, it is a sign of progress that an effort was made to meet the needs of those coming out of the services in the last war, and that so many have been successful on the land, or in the trades or professions which they undertook to learn.

## Funny and Otherwise

"Although my sister is a bit of a flirt, she'll eventually settle down all right."

"Yes. She told me herself that her ambition is to go out with every Tom, Dick, and Harry."

"Darling, that's just as lovely diamond ring."

"Yes, dear, if ever I have to return to live in a basement ring it will be one like that."

Wife: "All right, my dear husband, I'll admit that I spend money. But just name one other extravagance!"

Johnson returned to his native town after some years abroad. "The first person I met was the same one who had not yet married him."

"No, but he thinks he has."

"In what way?"

"Well, he's been talking about what a fool he used to be!"

Lady: "I'm part of 'Who's that pretty maid who was passing out cocktails a while ago?"

Hostess: "Oh, you are looking for a man?"

Lady: "No. I'm looking for my husband."

**SLEEP TO-NITE**  
SECRETIN tablets taken according to directions is a safe way to induce sleep to the new and weary traveler. Draw secretin at bed-time, ten minutes before bed.

**REAL HELP FOR Your Itching Piles OR NO COST**

If Item-Roid, the internal pile treatment, is not effective in stopping your piles and burning pain of your piles—get it.

Get a package of Item-Roid at any drug store. You will be amazed at how quickly your pile trouble is relieved. Item-Roid is big no tablet package.

If you are not satisfied after 3 days, as a test, ask for your money back.

Refund guaranteed on all drug stores.

### SORE THROAT?

Don't suffer from common sore throat, when you can get something to eat. Rub in soothing Minard's Liniment. It will get a supply, today! Get quick relief—today!

**MINARD'S LINIMENT**  
"KING OF PAIN"

## Selected Recipes:

Pork chop combined with your own canned corn, and enriched with milk and a couple of eggs, is tasty, filling and easy to make for Saturday night's supper.

### Pork Chops de Luxe

One half tsp. salt, 2 cups canned pork chops, 1 cup canned cracker crumbs, 2 tbsp. butter, 2 eggs, beaten, 1/4 cup milk, 6 end cut pork chops.

Mix together corn, salt, and green pepper. Place a layer of the corn mixture in a greased baking dish.

Fry pork chops in butter. Top with another layer of the corn mixture and sprinkle with cracker crumbs. Dot with butter. Mix eggs and milk and pour over the corn mixture. Sprinkle with salt and green pepper and arrange on top of 10" casserole and bake in a 325 degree F. oven for 45 minutes.

### Practically Everybody In Reston, Man., Interested In Oil

(By John MacNaughton in Brandon Sun)

BRANDON—Everyone in the Reston area is interested in oil, the local Agriculture Society receives \$320 a year in lease revenues with the prospect of much more if oil is won.

It is estimated that about 70 per cent. of the oil rights in the Reston district are presently held by the government.

As a result, discovery of a field in the area would bring proprietary difficulties.

Even without oil discoveries, the area will be much better off than it was before. C. F. McMurtry, secretary of the Brandon Agriculture Society, of which Reston is the municipal seat, estimates that more than \$30,000 is coming into municipal

parity in lease revenues every year.

Many farmers are receiving enough to pay their taxes, and the local Agriculture Society receives \$320 a year in lease revenues with the prospect of much more if oil is won.

## New Variety Of Malting Barley Proving Superior To O.A.C. 21

WINNIPEG—U.M. 43-1020, new malting barley variety developed at the University of Manitoba, has already proved superior to O.A.C. 21, present standard for the malting industry. Prof. S. B. Helgason of the University's plant science department, finds test results have been "very promising." Prof. Helgason reported and malting tests on a 500-acre farm in Manitoba last year.

There is little doubt, he said, that this new variety will be a success in the field. Land "under the ditch" in that area is now total 618,000 acres, and will be almost doubled, he estimated, when the project now underway is completed.

If the new variety is licensed then, Prof. Helgason estimated that about 2,000 acres would be available for potato planting.

He spoke to the annual meeting of the Canadian Barley and Oil Seeds conference at the Fort Garry hotel.

He pointed out that the new variety is good business. Prof. R. A. Hedin, University of Manitoba, said,

fallow-field tests in the province revealed that application of 40 bushels of manure per acre, plus 11-48-10 fertilizer, produced a barley yield of 14 bushels at a cost of only \$2.10.

On stubble, he added, 16-20-0 was applied at 60 pounds per acre. Cost was \$4; yield increased 13.7 bushels.

S. A. Wells, of the Manitoba Research Station, reported that barley varieties are being developed for irrigated acreage in the southern part of that province.

T. E. Elders, Canada Malting company, said Winnipeg barley growers do not rely on fall germination tests. Spring tests, he said, would be more reliable.

Earlier seeding at depths shallow enough to just reach damp soil, he said, produced heavier yields, he said. Tests showed barley yields increased 30 per cent. when depth was increased.

IMPORTANT MINERAL Sulphur is used in the production of nearly everything we eat, wear or use.

### Success Tip—Bake it with MAGIC!

Combine in a greased casserole (6-cup size)

grated lemon peel and 3/4 c. corn syrup, 1 lbs.

flour, 1/2 c. sugar, 1/2 c. shortening, 1/2 c. honey, 1/2 c. milk, 1/2 c. water, 1/2 c. whole wheat flour, 2 1/2 tbs. Magic Baking Powder, 1/2 tsp. salt and 1/4 c. fine granulated sugar. Mix in 3/4 c. corn flakes, slightly crushed, and 1/2 cup of dried fruit, such as raisins, 1/2 cup milk, 3/4 tsp. vanilla and 3 tbs. shortening, melted. Make a well in dry ingredients and add liquids; mix thoroughly. Turn into prepared dish. Bake in moderately hot oven, 375°, about 40 minutes. Serve warm, with pouring cream. Yield—6 servings.

## How Scott's Emulsion Helps CHILDREN GROW STRONG, HUSKY!

### More than just a tonic

Two children are shown playing happily in a park. One is riding a tricycle, the other is pushing it. The caption reads: "More than just a tonic".

CHILDREN THRIVE on Scott's Emulsion. When they get sick, when they catch colds or get sick—see what happens when you give them Scott's Emulsion. It contains natural A & D Vitamins in natural oil—real "gold from the sea." Helps them attain robust health. Helps them build strong bones, sound teeth, a husky body! Helps them grow into fine, sturdy, lively children you'd proud to say! Try Scott's and see!

SCOTT'S EMULSION IS RECOMMENDED BECAUSE

1. It contains natural A & D Vitamins in natural oil—plus added minerals.

2. Easy to take, economical.

3. Four times stronger than plain cod liver oil, because of its concentrated oil.

4. Today—sure—get Scott's at your favorite store.

### TRY SCOTT'S EMULSION HIGH ENERGY TONIC

## What Happens to Pool Elevator Earnings?

LAST YEAR Alberta Pool Elevators had net earnings of \$1,623,966.62.

The Wheat Pool delegates decided to dispose of such earnings as follows:	
Cash dividends on member patrons' deliveries	\$ 400,622.00
Redemption of 1923-28 reserves	1,049,885.50
Income tax	83,390.93
Retained to increase working capital	104,692.69
	\$1,623,966.62

On February 15, 1952, the Alberta Wheat Pool mailed 20,000 cheques totaling \$800,000 to redeem 1923-28 reserves. Further redemptions will bring the total up to \$1,140,385. As this payment is a return of capital no income tax is imposed thereon.

When this year's distribution is completed, the Alberta Wheat Pool will have redeemed reserves to the value of \$8,900,000, all at 100 cents on the dollar.

The original reserve contributions totalled about \$8,400,000, so that only \$1,500,000 of reserves will then be outstanding in members' hands.

The Alberta Wheat Pool has no capital stock. Ownership rests with reserves.

As reserves are redeemed from original members (1923-28), they are re-issued to member patrons of Pool elevators in the form of patronage dividends.

When the 1950-51 program is completed, reserves to the value of \$6,000,000 will have been so re-distributed. Grain producers can increase their equity in Alberta Pool Elevators simply by delivering their grain to a Pool elevator.

With an understanding of Alberta Pool Elevator operations and policies, more grain producers should become Alberta Pool members, and the patronage of Pool elevators should steadily increase.

It is a simple matter to join the Alberta Wheat Pool. Your Pool elevator agent will explain how it is done.

## Town & District

Mrs. Botrell of Calgary spent a few days in town visiting at the home of Mrs. Rodeminsky.

Born March 6 to Dr. and Mrs. W. F. Ferguson, this event took place on the 1st anniversary of the new arrival's 6th birthday, Mr. Wm. Ferguson of Gleichen.

Mr. and Mrs. G. E. Evans and Mr. and Mrs. J. McIntyre of Calgary spent the weekend in town visiting at the home of their relatives Mr. and Mrs. Evans and Mr. and Mrs. G. E. Evans. During their stay they curled games with local curlers. On Sunday they were dinner guests of Mr. and Mrs. Tom Brown.

N. A. Riddell returned home after spending some days in Calgary doing carpenter work at the home of his son Albert.

A funeral party was given Dr. and Mrs. Riley Sunday evening at the home of Mrs. Sherback by the members of St. Victor's Church. The Dr. has been a member of the Blackfoot Indian band and was for many years a chief and is being transferred to Edmonton. There were between 40 and 50 friends present Sunday evening and the time was spent playing cards. Mr. N. J. Purcell, on behalf of the assembled guests presented Dr. and Mrs. Riley with a pair of candle sticks and embossed silver.

Paul Little Walker, Blackfoot Indian died Saturday evening at the age of 83 years. Paul was well known about town and despite his age was quite active until his last ill. He was one of the real old Indians and when he walked down the street it was with all the dignity with which the Indians of old days used to walk. He was a true Indian to the bone. He was not a proud man and always had a pleasant word to say to the white men he knew. He was a councilor of the tribe. In his early days he taught the English Church here which at that time was the church of Canon Stocken who is now living at the coast. The funeral service was conducted by Rev. Mr. Cole at Old Sun Chapel.

DR. F. V. CREAMER, Director, Line Electric Service, Winnipeg, Manitoba.

President by the following companies:

Federal Aircraft, Canadian Mackay, Canadian Electric, Canadian Biscuit, Canadian Biscuit, Canadian Wheat, Royal Road and Quaker Oats.

Treating Seed Means Better Crops

Seed treatment and cleaning is the first step in farming. Canada should take this Spring to insure increased yields of high quality, strong, healthy seed.

Why Seed Treatment? As we pointed out in our last article, a very large number of insects exist in Western Canada. The common cereal smut can be easily, effectively and economically controlled by seed treatment. Furthermore by seed treatment, the seed treatment gives good control of certain other destructive seed-borne diseases, such as ergot, ergot, and protects the seed against soil-borne diseases such as the root rot and seedling blight.

Recent Treatments. The officially recommended seed-treating chemicals for 1952 are Agrox C, Copper Oxide, Copper Oxide, Agrox C and Panogen. These chemicals are highly effective in controlling most soil-borne diseases of cereals except loose smut of wheat and barley. The chemicals 'Anticin' and 'Root-No-More' will control most of the root diseases that attack the roots of oats and barley. Be sure and treat dry seed of all cereals at least 24 hours before sowing. Do not use artificially dried grain for seed unless you know the germination is 100%.

Treatment of Damp Grain. Under no circumstances should "tough and brittle" grain be treated with Formalin or Bluestone. Wheat, oats and barley with a moisture content of more than 10% and 10.5% and flax with over 22% moisture should not be used for seed unless a germination test has shown that it germinates satisfactorily. If the moisture content of grain of good germination should be treated with an approved chemical, such treatment should not be applied for 24 hours before sowing.

The best seed treatment advice we can give you is to use the best seed, treated, treated in 1952. The best seed treatment advice we can give you is to use the best seed, treated, treated in 1952.

Mr. F. W. Gershaw

In the details on the address, great latitude is allowed by His Honor the

Speaker. The members take advantage of the opportunity to discuss problems of their constituencies and a forecast of the legislation to be introduced is given by the government.

Then the other member of the opposition gave a speech on a subject of interest to Canada in a speech taking up 11 pages of Hansard. The Prime Minister's reply took up seven pages and he was speaking without notes.

Both leaders took the view long ago expressed by Sir John A. Macdonald to the effect that it was the duty of this parliament to be more considerate of conditions in Canada and of conditions elsewhere in the world. There was, however, general agreement on the foreign policy.

The costs of the recent wars had created a debt of some 13 billion dollars. The budget revenues have enabled the government to pay off \$35 million in 1947, \$76 million in 1948, \$95 million in 1949, \$131 million in 1950 and \$22 million in 1951. The total paid off since the end of the war is \$1.2 billion.

In 1947, Alberta was producing 19,000 barrels of oil per day. During the last year from 100,000 to 168,000 barrels were produced daily. The total in 1952, of oil in the Western Provinces will likely be 280,000 barrels per day and the requirements of all Canada will be 406,000 barrels daily.

In the last five years in Alberta, 125 new gas discoveries have been made. It was pointed out that the new discovery is an extremely risky one, but it was predicted that within a decade Western Canada will be turning out oil and gas with a value greater than the value of the agricultural industry.

Naturalists say lichen, growing on rocks across Canada, may be the oldest living things on earth. Their annual growth is microscopic.

If you could place an ad in the Mon. millions of people would read it.

Even though it would only be valuable a few nights each month, whereas a Want Ad in the paper while more limited in its scope will cover this particular subject every day in the
